

"DNA contamination in 8 vials of Pfizer monovalent mRNA vaccines"

VAERS details for the lot that Kevin McKernan tested (FL8095)

First of all to my lovely and patient readers, I have been visiting family and hence my lack of posting Substack articles for the past 2 weeks. I interviewed Kevin McKernan during this time, however, as my 8th CHD show that you can watch [here](#). I think it was a great conversation that can appeal to, and be understood by all.

Kevin’s latest endeavor was to check whether or not the dsDNA contamination that he found in the bivalent shots can also be found in the monovalent COVID-19 products. You can read his latest [here](#).

In summary, Kevin tested 8 Pfizer vials, previously unopened, all from the same lot # FL8095.

These vials were unopened but dated 9/21 on the label and 3/4/22 (hand writing). 2 ul from each vial were analyzed.

Here are Kevin’s conclusions following qPCR and RT-qPCR assaying.

Conclusions

8/8 monovalent vaccines sourced from a single case from a single lot of Pfizer monovalent vaccines all fail the EMA specification of 3030:1 RNA:DNA (330ng/mg DNA/RNA). They are over the limit by an order of magnitude (18-70 fold). The DNA contamination is very consistent and the vial to vial ratio of RNA:DNA is very consistent within the same lot of monovalent vaccines. Further sequencing is underway to evaluate the 72bp heteroplasmic indel in the SV40 promoter of the vector. This was detected in the Pfizer bivalent vaccines.

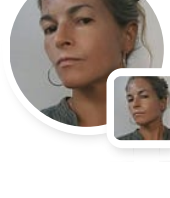

100% of the vials had this same contamination found [previously](#). Granted, this is a small sample size, but 100%? I wish I could say that this surprises me but it does not. According to Sasha Latypova, this particular lot is very large.

She writes in her latest Substack that you can read [here](#).

In total 5.5 million doses of Pfizer monovalent COVID-19 vaccines were shipped to all US states.

5.5 million doses of Pfizer monovalent COVID-19 vaccines were shipped to the States and 95% of these doses went to children 19 years and younger. So let’s play.

As of March 31, 2023, VAERS Domestic Data/Analysis: Dr. Jessica Rose reports in VAERS domestic data of 1109 reports for children 19 years and younger and 95% are for children 19 years and younger. VAERS world peak for children aged 5.

I can only speculate as to why there are so many reports for 5 year olds, but I would guess that it’s related to them being on an age cusp and being injected improperly based on age. It is worth noting that the most highly reported MedDRA code used for children (0-12 and 0-19 and for the 5-year olds) is “Expired product administered”. It is also worth noting that there are no reports of ‘Suspected product contamination’ in the reports.

4.3% of the reports are severe, and there are indeed two death reports. However, these two reports appear to be for the same person. The VAERS IDs are 2414702 and 2416877. Feel free to check (10 year males with almost identical histories).

So although it appears from preliminary VAERS reports that the majority are not severe, we are very early into this and we, once again, have no idea about long term effects of these shots. There are very much experimental.

1 death, is still 1 too many deaths.

Just to re-remind everyone so that you can pass this information on, these shots were given to children who were likely perfectly healthy and did NOT need them. This single death comprises a safety signal from a government-owned pharmacovigilance database and it needs to be addressed by the owners of this data: the CDC and the FDA, no matter how ‘safe and effective’ they want you to believe that they are.

Amazing that the CDC is now admitting that healthy people don't really need the vaccine. They should have started that a few years ago.

Save some for evidence, some for further research and some to inject Fauci, Baric, and their ilk.

Remind 'em that they're safe and effective.

This is one of the emails I received the other day. I get hundreds daily, and I am hearing you all.

This particular note spoke loudly to me and this lovely person gave me permission to share her words.
